

The Future of Sample Preparation and Analyses has arrived

Introducing the accroma SamplePrep System

Intelligently optimizing the workflow process from sample to knowledge with uncompromised accuracy

Traditional sample preparation techniques need to change

Sample preparation is one of the most vital parts of any laboratory workflow. **Unfortunately, more than 60% of all errors occur during this specific phase**, leading many laboratories to identify that sample preparation and analysis is **the most frustrating and expensive component of the workflow**.

Now while analytical technology has evolved remarkably over the last two decades, most **sample preparation still relies on antiquated manual techniques** that can produce unreliable results and with highly variable reproducibility.

Notably traditional sample preparation workflow still consists of weighing, extraction and cleanup all of which use manual sample transfer steps through the transition and is **largely vulnerable to human error**.

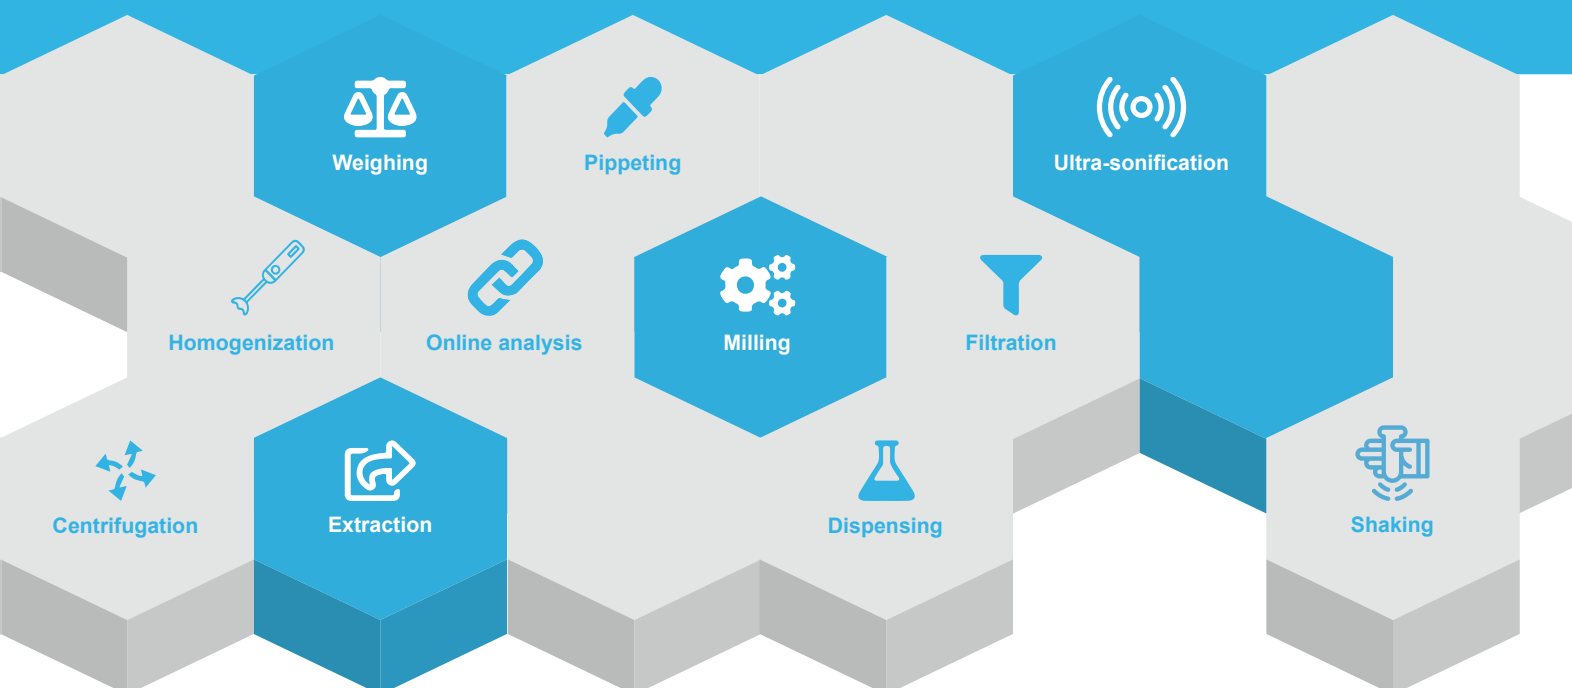

A multi-faceted automated sample preparation solution, that optimizes the workflow process is a laboratory necessity

Introducing the accroma samplePrep system that automates the entire sample preparation process for solid samples across multiple industries.

It offers innovation and precision where it is needed most. Optimizing the whole workflow process, from sample to knowledge with uncompromised accuracy.

The accroma SamplePrep System offers many advantages over manual sample preparation

Superior Accuracy

- Minimize Human Errors
- Less variability through standardization

Improved Efficiency

- Shorter cycle times and up to 90% reduction in hands-on sample preparation time
- Straight forward method transfer
- High flexibility

Reduced Costs

- Up to 90% reduction in labor costs
- less commercial space required

Improved Compliance

- Verifiable Documentation & Traceability
- Fewer Deviations in workflow events

User friendly & Easy to Use

Total Workflow Solutions From Sample to Knowledge with superior accuracy

Minimize Human Errors

Even the easiest sample preparation can be the source of multiple errors. In relative terms, 30% of all errors in chromatography derive from sample preparation and another 19% from the operator. Human errors lead to incorrect results, deviations, and time-consuming investigations. By using accroma® automated sample preparation, the sources of human errors are minimized.

Less Variability

It is very difficult to standardize methods and precise sample preparations within and between laboratories, especially when methods must be transferred from one location to another. Sample preparation methods are often written with room for interpretation of equipment and procedures, making standardization difficult to achieve. This causes variability in the data. The accroma® system provides repeatability and reproducibility, therefore the exact same methods can be simply implemented in different laboratories all over the world.

Challenges with manual Sample Preparation

Swiss Automated Precision that is Efficient and Flexible

Up to 120 different samples & workflows with one run

Reduce precious time

The accroma® automates the entire sample preparation process. From weighing the sample, to extraction, to transferring it into the analyzer, the system works autonomously. It enables "sample IN – result OUT" even for the most complex samples and workflows. It results in a significant reduction of cycle- and hands-on times. You will get your results earlier and can use your time and resources smarter.

Simple method transfer

Method transfers between different people or even locations can be frustrating as equipment and techniques are difficult to standardize. Imagine that sending a workflow file to your colleagues or to your CDMO is all what is necessary for a successful method transfer.

No cleaning - High Flexibility

The samples are prepared in disposable tubes spatially separated from each other. Therefore, cleaning of the extraction vessel is not required and carry over between samples is not an issue. These features make the system very flexible and fast while minimizing the usage of solvents, compared to other automation solutions.

The system handles different workflows without changing the setup:
Samples can be prepared from low to high quantity while saving hands-on time

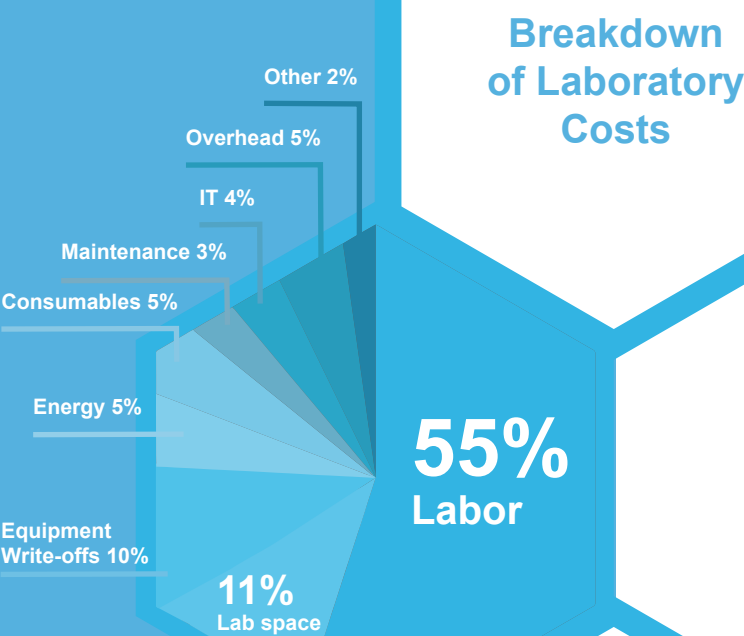

On- / Offline Analysis

Automation that allows for significant reduction in Laboratory Costs

Reduction in Laboratory Space and Labour Costs

Approximately 66% of the laboratory costs are personnel and infrastructural. One of the biggest advantages of accroma® is that it automates the manual workflow process, thereby saving considerable hands-on time up to 90%. It also does not need expensive laboratory space and can work in a regular ventilated commercial space. The robustness of the system allows it to operate 24/7.

Improved Compliance through better Traceability and fewer Deviations

Better Documentation

Manual sample preparation also requires manual documentation, which is very inefficient. Due to the limited options regarding documentation, it is problematic to find the source of the errors in retrospect. However, during automated sample preparation, the data is registered within each sample in real time. Every system setup, login, and modification, such as opening the door is checked and recorded. By using the accroma® system, all of the information regarding each sample preparation run, can be verified and traced back.

Minimize Costly Events

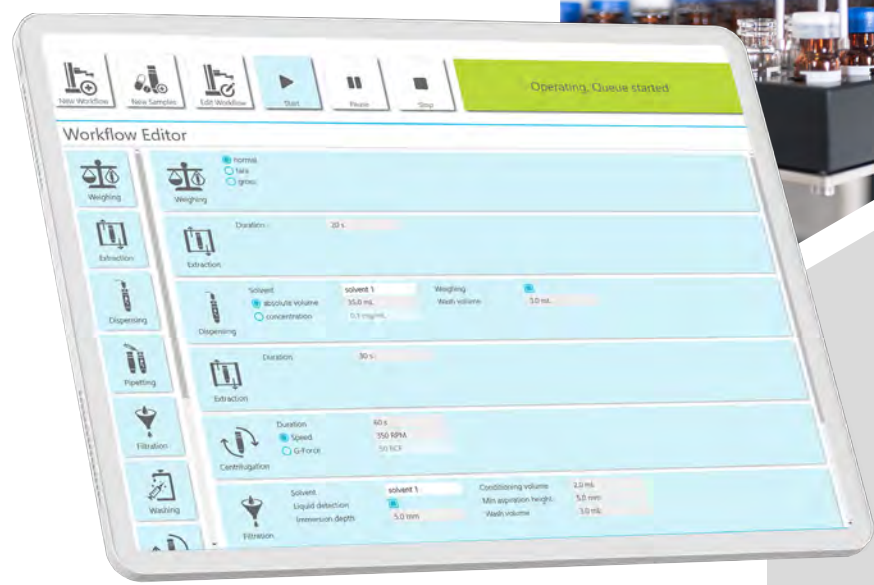

Deviations can result in serious problems such as delayed market release or withdrawal from the market. Every deviation requires extensive documentation and auditing. These issues can be avoided by using the accroma® system because everything is automated and digitized, allowing each step of a given workflow consistent and precise. Furthermore, the accroma® system provides a safe working environment in the laboratory by reducing exposure and avoiding accidents from glassware.

Easy to use Software with assured Data Integrity

The accroLab software was developed to increase efficiency and minimize time consuming procedures, with a strong focus on ease of use. Using drag and drop in the workflow editor, methods and workflows can be created or adapted easily and quickly. No programming skills or automation know-how are needed to operate this robotic system. The system parameters and manual steps are recorded in real time and can be found later through advanced search functions. Individual user rights can be assigned to users in different roles and data records can be released by using electronic signatures.

The accroLab software offers a high level of data security and is CFR 21 Part 11 compliant.

When the accroma® system is coupled with an analysis device, interfaces to Chromatographic Data Systems (CDS) are available.

Technical Data

Voltage: 100-240 VAC
Frequency: 47-63 Hz
Dimensions(W x D x H): 144 x 113 x 200 cm
Weight: 425 kg (Basic configuration)

Analytical Balance

Manufacturer: Mettler-Toledo
Max load: 410g
Precision: ± 0.1mg
Linearity: ± 0.4mg

Filter Dispenser

Capacity: 160 Filters

HPLC Vial Rack

Capacity: 64 Snap Ring Vials
64 Caps

Shaker

Functions: Dry- / Wet milling
Extraction
Homogenisation

Liquid Module

Functions: Dispensing
Pipetting
Filtration

Consumables

Filters
Pore size: 0.2
0.45
Materials: PTFE, RC,
PVDF, Nylon

accroTubes
Tube size: 120ml, 15ml
Material: HDPE
Colors: white/black

Steelballs
Steelball size: 16mm, 22mm

Screw Caps
Material: PE/Butyl/Rubber/PTFE
Colors: white/blue/green/red/yellow

Extraction Tube Rack

Capacity: 124 positions for
tubes & filters

Online analysis interface

Second Extraction module: Ultrasonic bath or Shaker

Options +

Centrifuge

Manufacturer: Hettich
Maximum rotation speed: 4600 rpm
Temperature control: -20 C to 40 C

accromate

Automate your sample preparation!
